

Baja SAE California – Spark Arrestors

- All teams at Baja SAE California are required, per California State Park rules, to be equipped with a Spark Arrestor.
- There are two (2) acceptable spark arrestors:
 1. The spark arrestor which was included with your Model 19 engine, pictured below, left.
 2. Briggs and Stratton Part Number 790153, available at any [Briggs & Stratton dealer](#) pictured below, right.
- It must be installed prior to arriving at the event and no engine can be started without the spark arrestor installed at this event.
- The spark arrestor does *not* need to be included in your cost report this year, as one was included with your engine.
- Clarification: The spark arrestor is considered part of the engine, and therefore must be **fully inside the roll cage**, in accordance with rule B12.1.

- Reminder: ALL Engine guards and covers must remain installed on the engine.
